

August 21, 2023

Dear Valued Customer:

To support growing electric demand, PSE&G has recently begun construction of a new substation located at 130 Hartford in Delran. This new station will improve performance of the electric transmission system, while maintaining safe, reliable service for area residents and businesses. The new Rancocas Substation is expected to be in-service by the Spring of 2024, with landscaping and final restoration completed afterwards.

- On or about Monday, August 28, 2023, PSE&G is scheduled to begin Pole installations. The route includes **Hartford Road between the intersecting streets of Bridgeboro Road and Garwood Road, Bridgeboro Road between Hartford Road and Creek Road and South Bridgeboro Road between Creek Road and Burlington Pike.**

Work hours will be 9:00 a.m. to 3:00 p.m., Monday through Friday. If necessary, there may be weekend work as well. PSE&G will work in conjunction with local police departments on any traffic and/or parking adjustments to minimize inconvenience.

There may be some unavoidable sound connected to this construction. PSE&G will monitor all sound activities to align with acceptable limits, and minimize adverse impacts to the area. All schedules are estimates, weather dependent and subject to change.

There are no planned electric service outages as a result of this activity.

Safety is our highest priority. PSE&G will work with the local police department to safely control the flow of traffic for motorists and pedestrians. It is essential that you and anyone using your property, including children and pets, refrain from going near our construction work zones.

We appreciate your patience and support as we improve the electric service reliability for your neighborhood and the region. If you have any questions about this project, please call the project information line at **1-800-606-0045**.

Sincerely,
PSE&G Public Affairs
